

REMARKS/ARGUMENTS

Reconsideration and withdrawal of the rejections of the application are respectfully requested in view of the amendments and remarks herewith, which place the application into condition for allowance. The present amendment is being made to facilitate prosecution of the application.

I. STATUS OF THE CLAIMS AND FORMAL MATTERS

Claims 1-6 are currently pending. Claim 1 is independent. Claims 1-6 are hereby amended. No new matter has been introduced. Support for this amendment is provided throughout the Specification as originally filed, and specifically at page 20, lines 2-8 and Fig. 1. Changes to claims are not made for the purpose of patentability within the meaning of 35 U.S.C. §101, §102, §103, or §112. Rather, these changes are made simply for clarification and to round out the scope of protection to which Applicant is entitled.

II. REJECTIONS UNDER 35 U.S.C. §102(e)

Claims 1-6 were rejected under 35 U.S.C. §102(e) as allegedly anticipated by U.S. Patent No. 6,332,024 to Inoue.

Claim 1 recites, *inter alia*:

“An portable telephone comprising ...

editing means for permitting said user to edit said predetermined information displayed on said display unit.” (emphasis added)

As understood by Applicant, U.S. Patent No. 6,332,024 to Inoue et al. relates to a portable terminal that comprises an LCD display screen located on a control surface of a case for displaying information according to the communication mode; a main soft key located below the LCD display screen which can be rotated in a direction towards or away from the display screen as well as can be pressed; and a first auxiliary soft key and a second auxiliary soft key located on the two sides of the main soft key which can be pressed. In this portable terminal, for each communication mode, a function having the highest frequency of use is allocated to the main soft key mode and functions having the next highest frequency of use are allocated to the first auxiliary soft key and second auxiliary soft key.

One main aspect of the present invention is that the display indicates the directions to which a pointer is moved or can be moved from the current position by using a mark that indicates available directions that the pointer can be moved to. In contrast, Inoue relates to an operation method by using a controller (soft key) to display information on the display device, and therefore the relationship between displayed information and the controller is established as a one-to-one relationship. In the present invention, however, there is a pointer on the display itself. Furthermore, there is a mark that indicates the directions, which the pointer can be moved to. As a result, the relationship between the displayed information and the control section becomes one-to-two relationship instead of a one-to-one relationship.

Applicant submits that Inoue does not teach or suggest the above-identified features of claim 1. Specifically, Applicant submits that there is no teaching or suggestion of an editing means for permitting a user to edit predetermined information displayed on a display unit, as recited in claim 1. Therefore, Applicant submits that independent claim 1 is patentable.

III. DEPENDENT CLAIMS

The other claims are dependent from one of the independent claims, discussed above, and are therefore believed patentable for at least the same reasons. Since each dependent claim is also deemed to define an additional aspect of the invention, however, the individual reconsideration of the patentability of each on its own merits is respectfully requested.

CONCLUSION

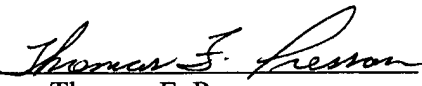

In the event the Examiner disagrees with any of statements appearing above with respect to the disclosure in the cited reference, it is respectfully requested that the Examiner specifically indicate those portions of the reference, providing the basis for a contrary view.

Please charge any additional fees that may be needed, and credit any overpayment, to our Deposit Account No. 50-0320.

In view of the foregoing amendments and remarks, it is believed that all of the claims in this application are patentable and Applicant respectfully requests early passage to issue of the present application.

Respectfully submitted,
